

Please choose one small topic from your syllabus and design an interactive tool which will demonstrate the topic effectively. Topics should not repeat

USN	Name	Topic you choose	Description of the topic	Remark
4802SC9001	A. Raju			
4802SC9002	A.B Vinayash Kumar			
4802SC9003	Aamir Dsouza	Method of Mathematical Induction	An interactive web-based tool that demonstrates mathematical induction through step-by-step proofs, allowing students to practice the base case, induction hypothesis, and inductive step with simple examples and interactive questions.	
4802SC9004	Aarna Raveen			
4802SC9005	Abhinav M Pirand			
4802SC9006	Abhinav Radhak Indar	Combination with Repetition	A fun, interactive game that teaches Combination with Repetition through challenges where players select items repeatedly and solve mathematical combinations.	
4802SC9007	Abhishek			
4802SC9008	Abhigail Prasadnan			
4802SC9009	Adithya Anil Shetty	Euler Path and Euler Circuit	determine whether a graph has an Euler Path or Euler Circuit based on the degree of its vertices.	
4802SC9010	Adithya D K			
4802SC9011	Adva R Raj			
4802SC9012	Adithyana			
4802SC9013	Agn Wilson Martin			
4802SC9014	Akhil Raj			
4802SC9015	Akhilasha D			
4802SC9016	Akhyan B M			
4802SC9017	Alan Rohan Lobo	Vertex degree	A tool for identifying, calculating, and analyzing the degree of vertices in different graphs.	
4802SC9018	Alex Joseph			
4802SC9019	Alister Peter Marcel Denson			
4802SC9021	Alvina Pini			
4802SC9022	Alvina Nirmalan			
4802SC9023	Ambika H	Cartesian Products and Relations	An interactive activity to learn Cartesian products and relations by creating ordered pairs, identifying possible combinations, and finding relationships between elements of two sets.	
4802SC9024	Amanah			
4802SC9025	Amanya Arvind K	The laws of logic	fundamental rules used to prove logical equivalences and simplify complex propositions without using long truth tables.	
4802SC9026	Amarth A	BFS & DFS Graph Traversal	An interactive web-based tool that allows students to create graphs and visualize Breadth First Search (BFS) and Depth First Search (DFS) traversal step-by-step, showing visited vertices and traversal order.	
4802SC9027	Anni Petrina Fernandes			
4802SC9028	Anishak D	Graph Theory (specifically Graph Coloring)	Design and Implement "ColorCraft & Planarity" , an interactive, web-based visual exploration tool that allows students to construct arbitrary graphs dynamically, inspect topological properties in real time, and experiment with algorithmic graph coloring and planarity verification.	
4802SC9029	Anshu U Sallan	Inclusion-exclusion principle	A simple counting principle that avoids double-counting overlapping elements in sets.	
4802SC9030	Anumaya			
4802SC9031	Anupalla Bhat	Properties of Relations	An Interactive Web-based tool that allows students to enter a set and relation and check whether the relation is reflexive, symmetric, antisymmetric, and transitive, with step-by-step explanations of the results.	
4802SC9032	Anusha			
4802SC9033	Anusha Judith Pinto			
4802SC9034	Anusha K	Logical Equivalence	An interactive web-based tool that generates truth tables for logical expressions and check whether two propositions are logically equivalent	
4802SC9035	Anya H Kotary	Book Polynomials	An interactive web-based tool to design custom restricted boards and visually calculate their corresponding rook polynomials.	
4802SC9036	Apeksh Shetty			
4802SC9037	Araa Corina			
4802SC9038	Arunika			
4802SC9039	Arya Shetty			
4802SC9040	Ashal Swam Karavipra	Trees and Sorting	An interactive web-based tool to learn tree structures and sorting algorithms through simple visual examples	
4802SC9041	Ashish Shrivast			
4802SC9042	Ashwith A			
4802SC9043	Ashvi Akva	Graph Isomorphism	A web-based tool that checks whether two graphs are isomorphic by comparing their structure and identifying the corresponding vertex mapping.	
4802SC9045	Ayesha Shama			
4802SC9046	B M Sanaad			
4802SC9047	B. Nandesh Kumar			
4802SC9048	B R Raviini	Permutation & Combination	A study focusing on arrangement and selection, with creative visual examples to make the concepts easier to understand.	
4802SC9049	Babulu K. Bangera	Pigeonhole Principle	An interactive web-based tool that demonstrates how repetition becomes inevitable when more objects are placed into fewer categories.	
4802SC9050	Balakrishnan Sheelakant Kulkarni			
4802SC9051	Bhagavathree Dharmakumar Bradar			
4802SC9052	Bhargava R.G			
4802SC9053	Bhavana D V			
4802SC9054	Bhoomika Patrick Pinto			
4802SC9055	Charthanya Preethi			
4802SC9056	Charmay			
4802SC9057	Chinnmayee			
4802SC9058	Ching Alva	Dijkstra's shortest Path algorithms	An interactive, web-based visualizer designed to bring Dijkstra's shortest path algorithm to life on a dynamic 2D grid, inspired by classical pathfinding models.	
4802SC9059	Ching P			
4802SC9060	Chris Royson Monteiro	Quantifiers	Tool to understand quantifiers, evaluate quantified statements and practice problems using examples	
4802SC9061	Civenden Max D Mello			
4802SC9062	D Akshay			
4802SC9063	Darshan Karagol			
4802SC9064	Deeksha Ravi Moser			
4802SC9065	Devidha Fernandez	Basic Connective and Truth Table	An interactive tool demonstrating basic logical connective and truth tables, allowing users to select inputs instantly view the corresponding truth value	
4802SC9066	Dharmesh Peesary			
4802SC9067	Dhanya			
4802SC9068	Dhanya Madhukrishna Malavade			
4802SC9069	Disha Dharmajay			
4802SC9070	Dishanth			
4802SC9071	Diva Ganesanthy
